ASSESSMENT TEST RESULTS WITH BIO-MOLECULES/PURE VIRGIN WOOL PRODUCED BY CAFISSI SPA/CEM

Osteoarthritis is a degenerative disease that affects around 10% of the adult population in general and the 50% of the people with 60 years of age and more. It is one of the most common causes of painful disorders and affects joints, especially to the load of the weight of the body, such as the lumbar vertebrae and knees. The affected joint has cartilage abnormalities with thinning, marginal osteophytes formations, fissures and sub-chondral Osteosclerosis areas.

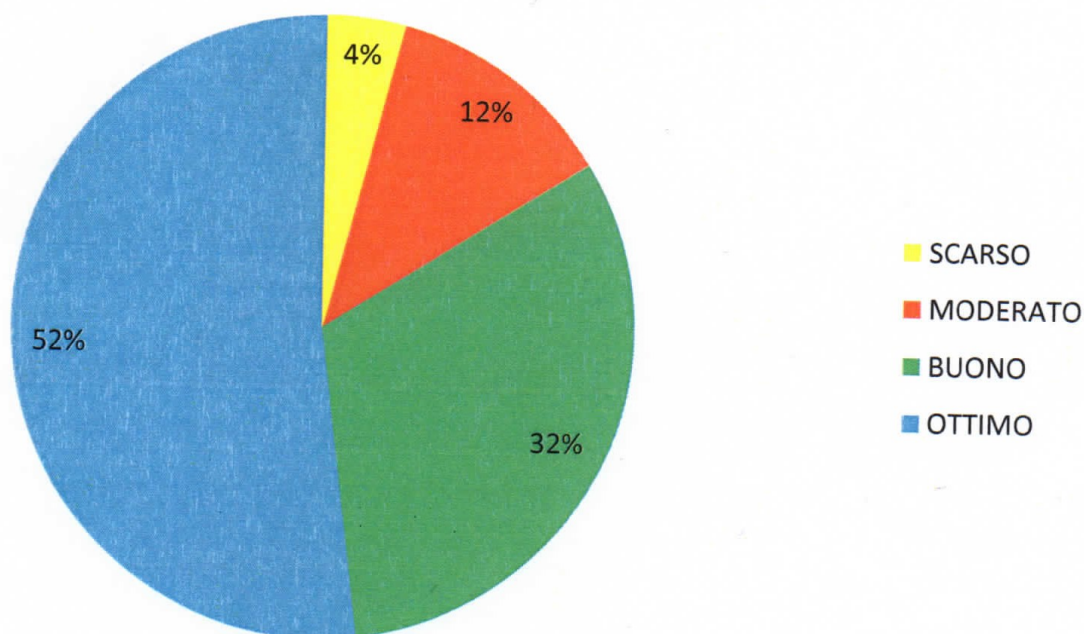

Aim of this study is to know the value of the product and its beneficial properties by making an objective assessment of the effectiveness in pain treatment, swelling state and painkilling drugs intake by using these bio-molecule devices. The bio-molecule active crystals (FAR INFRA RED RAY), loaded within the wool fiber, absorb and release heat from the body (once it has contact with skin) and have many beneficial and therapeutic effects: improve cell metabolism, blood streaming, liquids drainage and skin elasticity.

This fabric embodies the best wool characteristics: extremely soft and cozy, providing an isothermal effect, a pressure-relief and micro-massage effects.

So, we decided to evaluate and compare this product on 25 patients between the ages of 50 and 85 years, most of them with bones and joints diseases, and based on the results provided, try to understand effectiveness and validity of the beneficial properties of the product.

Since now, the results show that using these devices during sleep time, highlights some important and beneficial effects on pain, symptoms and patient lifestyle.

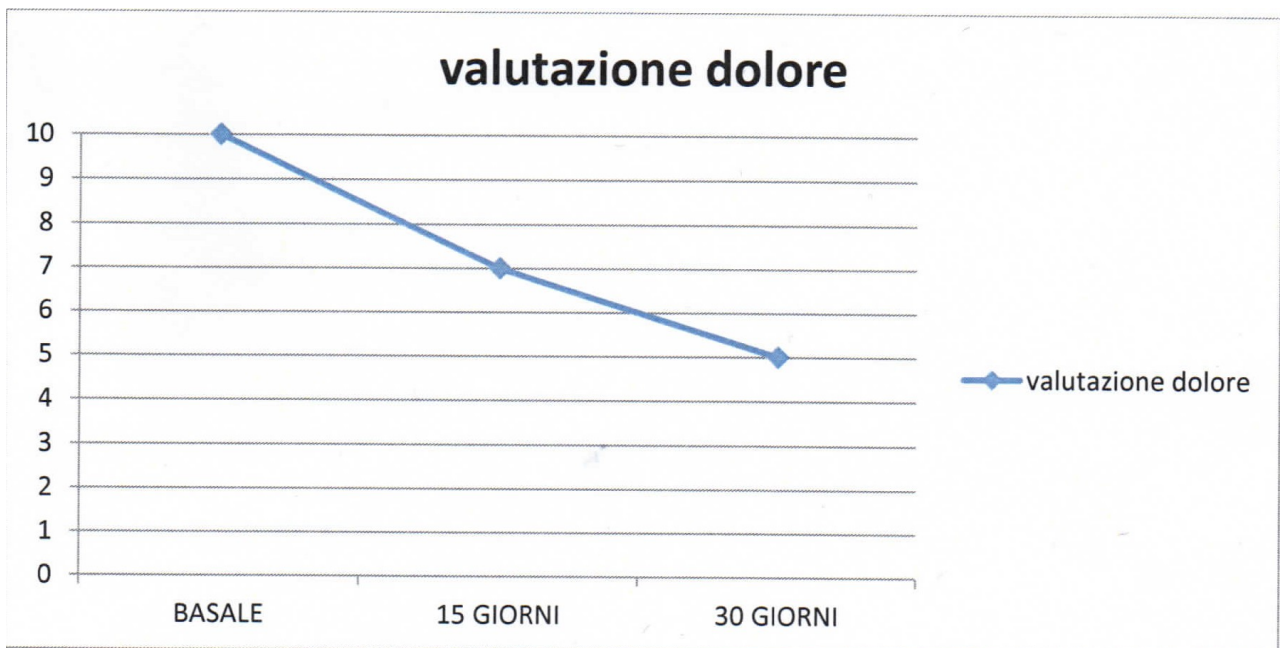

EFFICACIA DELLA TERAPIA

CENTRO DI SCIENZE MOTORIE E RIEDUCAZIONE FUNZIONALE

One of the main effects is the effectiveness of the therapy on the chronic pain that has shown very positive results.

With these results, obtained in 2 months with the sample of patients sued, we confirm the validity and efficacy of the product.
