CLINICAL EVALUATION REPORT

MEDICAL DEVICE: **BIOMOLECULES FABRIC**

Ref.: use of BIOMOLECULE fabric for therapeutic purposes

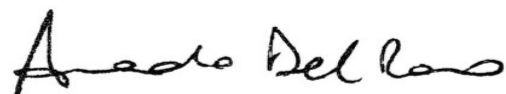

I'm a specialized veterinary in horse orthopedic treatments. Work with horses since 1988.

I have used BIOMOLECULE fabric to bind trotter horses limbs. They showed traumatic stress pathologies, for example, in cronic desmopathies of suspensory ligament, in anular ligament syndrome, in serious arthrosis and flexor tendinopathy.

They were treated horse between the ages of 2 and 10 years, from 23 of February since today. Bands were applied in the evening and removed the following morning. This operation has lasted 1 month.

I can affirm, in all cases, a reduction of edema and pain by palpation of the affected areas.

This fabric has the property to improve drainage capacity of the inflamed areas, and, therefore, to promote healing.
